

Corporate Sustainability Reporting (CSR)

GRI Online
Corporate Sustainability Reporting

GRIonline.biz provides organizations with a simple online solution to measure Key Performance Indicators (KPI) for reporting, analysis, tracking and monitoring to assess the sustainability performance of their business. This will provide an overall view of business activities and help companies attain sustainable growth. GRIonline.biz solutions are so flexible that the end user can define and configure sustainability parameters to measure according to the organizations needs and track the performance simply in real time.

Line Managers and Management Executives are increasingly under pressure to provide timely decisions to improve their sustainability and operational performances. Companies will be able to manage and deliver better performance by having the ability to easily retrieve, review, and analyze KPI data and make faster informed decisions. Managing KPI information includes collecting, reviewing and analyzing the data. Managers need to have instant visibility to their KPI information on a real time basis to achieve corporate sustainability objectives. Collecting, tracking, reviewing and analyzing the data from different sources which is a difficult task that involves complex formulas and calculations to provide precise KPI results is made simple by GRIonline.biz.

Presently, GRIonline.biz is configured for Corporate Sustainability Reporting (CSR) which is built on Global Reporting Initiatives (GRI) guidelines. This solution tracks, manages and reports economic, environmental, and social key performance indicators information from different locations/work areas to generate Corporate Sustainability Reporting (CSR) to report Global Reporting Initiative (GRI).

- Very Flexible - where the end user can configure location specific KPI parameters
- Built-in Workflow and Calculation Engine, where the end user can define the processes and frequency of data collection.
- Profile, create & associate privileges and display KPI item based on assigned roles
- Ad hoc reporting – End user can create and generate user specific reports on real time basis
- Assign/create targets for each KPI
- End user can define the frequency of data collection for each KPI and site
- Built-in Alerts and Notifications incase of non-completion of task
- Built on Global Reporting Initiative (GRI) Guidelines
- Built-in reporting engine to generate reports in both tabular and graphical formats
- Exports reports all following formats Excel, Word, PowerPoint and CSV

GRIonline.biz - One system for all your needs

Using simplified features, a clean user interface and web based technologies, it is now easier to manage the information of triple bottom line key indicator data for the organization. This information gives the company's performances towards reaching sustainable growth and the data generated will have a high amount of transparency, reliability and accountability. The authenticated data can be shared with stakeholders like employees, investors, suppliers, customers, etc. to make informed and timely decisions. GRIonline.biz helps you to eliminate spreadsheets, manual forms and disparate databases into a single online management system that is simple and cost effective to use.
